

# SANDEN FLX7: THINK FLEXIBLE

Mobile A/C has some of the most versatile parts in the heavy-duty aftermarket. Case in point: the Sanden FLX7 family of compressors.

Red Dot has a long history with Sanden and FLX7 compressors, which builds on the performance and durability of the SD7H15. The FLX7 comes standard with a pad-style cylinder head, four port fittings and two clutch lead wire terminal options right out the box. The cylinder head will readily accept any of the port fittings, which are low-profile and made of forged steel for better durability and less weight than cast-iron fittings.

With the FLX7 family you can satisfy a wide range of heavy-duty A/C configurations while at the same time reducing slow-moving and obsolete stock. Because of their versatility, the FLX7 does not just replace existing models, it makes it possible to create compressor configurations previously unavailable from Sanden. If you know a vehicle's make, model and year, you can build up a replacement compressor from a Sanden FLX7 and in the process consolidate hundreds of unique part numbers into less than 20.

It is expensive to carry every OE compressor configuration out there. With the FLX7, you can streamline inventory and still offer precisely the compressor your customer needs. Red Dot has Sanden all-makes compressors in stock.
